

# RAG Sample Document for PyPDFLoader

This is a sample PDF created for testing Retrieval-Augmented Generation (RAG) pipelines. RAG stands for Retrieval Augmented Generation. It combines document retrieval with language models. Key Concepts: - Document Loading using PyPDFLoader - Chunking text into smaller parts - Embedding generation - Vector database storage - Retrieval based question answering Use this document to test loading, splitting, and embedding in your RAG system. Example Questions: 1. What is RAG? 2. What are embeddings? 3. How does PyPDFLoader work? This file is simple and designed for beginners building GenAI projects.
